

REMOVAL / ATACHMENT

FIGURE 1

REMOVAL

1. Remove the two fixed screws from toe section of plate
2. Use rubber / wood mallet, and a beating block to beat the plate forward (2cm).
(Figure 1)
3. Once plate moves forward it should lift off the ski. Could require minor adjustment to free collared fastener from aluminum insert

FIGURE 2

ATTACHMENT

1. Once Ski is drilled and the six collared fasteners are attached by screws, align plate so that collared fasteners fit into appropriate slots on bottom of plate
2. With a rubber / wood mallet and a beating block begin slightly hammering plate (Figure 2)
3. Once plate begins to move hammer toe like (Figure 2) until fixed screw holes align with holes drilled in ski
4. Tighten fixed screws through plate into ski
